Electrical License Information

The City of Elkhart requires that electrical work be performed by or supervised by a licensed electrician. At the present time the Electrical Examining Board is using the Prometric (formerly the Block and Associate/ Thompson Experior), Master Electrician test as a basis for granting a license.

The Board requires a minimum score of 75% to pass. The test is given locally four times a year on the second Monday of January, April, July and October. Applications must be made in person at our office, thirty (30) days prior to the exam, accompanied by a non-refundable examination fee.

Test results from other jurisdictions using the same test have also been accepted by the Board. The Board does NOT recognize licensing from other jurisdictions but, will recognize their test results. Application and fee as listed above must be complied with before the Board will accept test results. These results must be sent from the jurisdiction giving the test to the Examining Board. These results must specify who the test was given to, when it was given, the type of test and the results of the test.

The Board meets on the **fourth Monday** of each **month that a test is given**. Upon satisfying the Board as to the qualifications of the applicant, a license may be issued by the Board. A license fee and completed registration form is required before the license will be issued.

Please call for additional information.

RESPECTFULLY

Daniel Riddle
